World Horticultural Trade and U.S. Export Opportunities

U.S. Orange Exports Forecast to Continue to Climb in Marketing Year 2000/2001

1,000 Metric Tons

F - Forecast

Source: U.S. Bureau of the Census

Total citrus production in the United States in 2000/01 is forecast at 14.8 million tons, down nearly 6 percent from the previous year's harvest. Total orange production in 2000/01 is forecast at 11.2 million tons, down about 6 percent from last year's output. As of July 11, California's Valencia orange harvest was in full swing. Harvest of the Navel orange crop is virtually complete. Grapefruit production in 2000/01 is forecast at 2.2 million tons, down 10 percent from last year's output. Florida's grapefruit production is estimated at 1.77 million tons, the smallest grapefruit production level in Florida since 1991/92.

Total U.S. citrus exports in 2000/01 are forecast at 1.2 million tons, 12 percent higher than the previous year's shipments, despite the lower production. Orange exports in 2000/01 are forecast at 625,000 tons, up 21 percent from the 1999/2000 level and up 155 percent over the freeze-damaged level of 1998/99. U.S. grapefruit exports in 2000/01 are forecast to increase to 410,000 tons. Despite the lower levels of production, exports have remained strong. U.S. exports to Japan during 2000/01 are running 2 percent ahead of last year's levels.

Export Summary

May 2001

U.S. exports of horticultural products to all countries in May totaled \$962 million, an increase of 6 percent from the same month a year earlier. Categories with the most significant increases in May were essential oils (up 23 percent to \$61 million), tree nuts (up 15 percent to \$74 million), and wine and beer (up 12 percent to \$68 million). The only category that declined was fruit and vegetable juices (down 3 percent to \$69 million).

May exports to Canada, the largest market, were up 7 percent from May 2000, to \$332 million. Exports to Japan and the European Union (EU) were up 2 and 8 percent, respectively to \$176 million and \$163 million. Exports to Mexico rose 22 percent to \$73 million. Exports to Malaysia showed the most dramatic jump for May 2001, up 62 percent from May 2000, to almost \$10 million, while exports to China rose 58 percent to \$12 million. Exports to Hong Kong, Korea, and Taiwan dropped to \$26 million (down 7 percent), \$26 million (down 6 percent), and \$23 million (down 11 percent), respectively, from May 2000.

Exports for the October-May 2000/01 period were up 8 percent from the same period in 1999/2000 to \$7.5 billion. Tree nut exports are up 22 percent to \$818 million for the October-May 2000/01 period, while fresh fruit exports are up 15 percent to \$1.4 billion, and fresh vegetable exports are up 8 percent to \$887 million. The fastest growing markets for FY 2001 to date are: China, up 96 percent; Malaysia, up 64 percent; Taiwan, up 16 percent; the Philippines, up 19 percent; Hong Kong, up 14 percent; Mexico, up 14 percent; and the EU, up 12 percent. Exports to Japan are unchanged for the October-May 2000/01 period compared with the same period last year.

New U.S. Trade Internet System

The public now has unlimited access to the most up-to-date data on U.S. exports and imports of agricultural, fishery, and forestry products. The U.S. Trade Internet System allows users the flexibility to customize their data searches and save their criteria for repeated use. Users can obtain value or volume data for selected harmonized codes or commodity groupings to track trends going back to 1989.

To view the site go to <http://www.fas.usda.gov/ustrade/>

For more information on the U.S. Trade Internet System, e-mail usthelp@fas.usda.gov

To access **FAS Attache Reports** on line, please go to the following Internet address:

[Http:// www.fas.usda.gov/scripts/attachrep/default.asp](http://www.fas.usda.gov/scripts/attachrep/default.asp)

Search through the country and market reports prepared by FAS attaches covering over 20 horticultural and tropical product commodities and nearly 130 countries.

What's New on the Homepage?

The Horticultural and Tropical Products Division has introduced a feature on its homepage designed to bring the latest information to the public as efficiently as possible. The site contains information on policy and technical developments affecting trade in horticultural commodities, selected reports submitted by FAS overseas offices, and special reports. For further information, please contact Nancy Hirschhorn (202)720-2974. Go to <http://www.fas.usda.gov/http/>.

Fresh Citrus Situation

Total citrus production in 2000/01 in selected major-producing countries is estimated at 64.1 million tons, down 10 percent from the 1999/2000 level. Almost all of the major-producing countries are reporting some level of decline in production, except for Cuba, Mexico, South Africa, and Argentina. Brazil is reporting a drop of 1.7 million tons in orange production, the forecast overall decline. The total output for the Northern Hemisphere is estimated at 45.0 million tons, down 11 percent. The Southern Hemisphere's production level is estimated at 19.1 million tons, down 8 percent. As a result of the lower supplies, major-producing countries' exports in 2000/01 are forecast at 7.3 million tons, down nearly 13 percent and processed citrus is forecast down nearly 11 percent.

Northern Hemisphere

United States

Total citrus production in the United States in 2000/01 is forecast at 14.8 million tons, down nearly 6 percent from the previous year's harvest. Total orange production in 2000/01 is forecast at 11.2 million tons, down about 6 percent from last year's output. As of July 11, California's Valencia orange harvest was in full swing. Harvest of the Navel orange crop is virtually complete. Grapefruit production in 2000/01 is forecast at 2.2 million tons, down 10 percent from last year's output. Florida's grapefruit production is estimated at 1.77 million tons, the smallest grapefruit production level in Florida since 1991/92.

Total U.S. citrus exports in 2000/01 are forecast at 1.2 million tons, 12 percent higher than the previous year's shipments, despite the lower production. Orange exports in 2000/01 are forecast at 625,000 tons, up 21 percent from the 1999/2000 level and up 155 percent over the freeze-damaged level of 1998/99. U.S. grapefruit exports in 2000/01 are forecast to increase to 410,000 tons. Despite the lower levels of production, exports have remained strong. U.S. exports to Japan during 2000/01 are running 2 percent ahead of last year's levels.

Israel

This year (September 2000–August 2001) is being considered Israel's worst citrus season since World War II. A combination of deteriorating citrus prices in new sheqel terms, internal political unrest, the continuation of a debilitating drought, and rising water prices all contributed to a catastrophic year for producers. Total citrus production in 2000/01 is forecast to reach approximately 658,000 tons, 18 percent lower than in 1999/2000. Although the market price for

Israeli citrus was 8–10 percent higher in local European currencies than in the previous season, the weakening of the European currencies relative to the dollar and the Israeli sheqel, mainly during the second half of the export season, caused exporters' c.i.f. revenues to drop by 20 percent. Continuing low profitability, combined with aging orchards and increasing water shortages are expected to lead to the uprooting of some 6,000 hectares of citrus orchards at the end of 2000/01.

The industry appears headed for a production volume below that which is needed to support the necessary export and processing services. The winter of 2000/01 was the third successive winter with lower-than-average rainfall. The government cut irrigation quotas in half and raised water prices. Retention of the current planted area is possible only by the substitution of recycled water for the very scarce fresh water presently in use. But because of the uncertainty as to the future of the citrus industry, growers hesitate to invest in replanting, regrafting or installing new irrigation systems.

Greece

Greece's citrus production for 2000/01 is estimated at 1.1 million tons. The tangerine and lemon production estimates were revised downwards to 80,000 and 136,000 tons, respectively, while the orange production estimate remained unchanged. The weather this season has been favorable, with somewhat higher temperatures recorded and the crop maturing a little faster than normal. Exports for oranges, tangerines and lemons this season, through mid March, were about 250,000 tons, 33,000 tons, and 22,000 tons, respectively, compared with 200,000 tons, 29,000 tons, and 14,000 tons, respectively, through the same period last year. One fourth of the orange and tangerine exports went to EU destinations and the balance to Eastern European countries. Only 10 percent of the lemon exports, however, go to the EU.

Mexico

Total citrus production in Mexico during 2000/01 is estimated at 4.9 million tons, up nearly 3 percent over last year. The fresh orange production forecast for marketing year 2000/01 has been revised upward to 3.5 million tons. Producers indicate that weather was good in most of the producing states, with timely rainfall, so the main harvest (October to April) was larger than expected. Orange trees had good first and second blooms, resulting in a larger volume of oranges. However, the large crop depressed prices. In fact, producers from Nuevo Leon left part of their harvested crop on the trees because of the low prices, and producers from Veracruz complained of the low prices by attempting to block roads. According to sources, such actions were viewed as an attempt by the orange producers to get support funds from the government. Oranges destined for processing for 1999/2000 and 2000/01 were revised downward due to the lower demand from the processing industry. The industry indicates that the low international price for juice concentrate will reduce the volume of oranges for processing.

The fresh orange consumption forecast for 2000/01 has been revised upward to 3.1 million tons,

reflecting good consumer purchasing power due to lower prices.

On May 30, 2001, key members of the Agricultural Committee of Mexico's House of Representatives met with a variety of leaders of the Mexican citrus industry to discuss the overall conditions for citrus production, marketing, NAFTA, and the status of Citrus Tristeza Virus (CTV) in Mexico. The President of the Agricultural Committee presided over the meeting along with other officials from the Secretariat of Agriculture, Livestock, Rural Development, Fisheries and Food (SAGARPA), Secretariat of Economy (SE) and the University of Chapingo. Citrus producers, representatives of citrus organizations, and state government officials were present at the meeting. According to reports, a series of question and answer periods produced some lively discussions. In general, producers' main concerns are access to domestic and international markets and the availability of credit to purchase the new disease-tolerant planting stock. Also, they asked for more government information on the status of all programs, including the CTV control program.

SAGARPA has indicated that about 90,000 families depend upon the citrus industry. To assist citrus producers in Mexico, several months ago SAGARPA announced a Citrus Support Program. Both the federal and state governments are involved in and support this program. The objective of the program is to assist farmers with planting stock by providing different supports to renovate groves with vegetative material that is certified free of CTV and resistant to CTV. SAGARPA funds are budgeted for the replacement or renovation of citrus groves with virus-free material and certified plants, to have specialized technical assistance, to establish producer lots of virus-free seeds and propagative material, and to have marketing assistance. This program is an important effort to reduce the possible spreading of CTV through the brown citrus aphid vector. SAGARPA also stated that CTV has already been reported in the country in different citrus-producing areas. Reportedly, the highly infested zones are within the states of Yucatan and Quintana Roo in southeast Mexico. Several phytosanitary norms and regulations have been published to prevent the spreading of CTV in Mexico. According to SAGARPA, several actions have been taken to eliminate CTV and the brown citrus aphid, including monitoring CTV outbreaks, using genetic and biological controls, training and providing information to farmers. The detection and eradication of plants has been carried out in different entities. It is prohibited to continue the use of CTV non-resistant material, and the gradual replacement of old trees with new resistant root stock is being enforced. So far, the state of Tamaulipas is the leader in producing CTV-resistant material and citrus grove renovation.

Japan

Japan's production of total citrus is estimated at 1.5 million tons, down 18 percent from last year. Most of the reduction is the result of reduced tangerine production.

Japan's imports of grapefruit are projected to reach 265,000 tons, with the United States accounting for about 80 percent of the total. This season's U.S. grapefruit made a strong impression with

Japanese traders, due largely to high quality and reasonable pricing, and is currently trading at prices 15-20 percent higher than last year at Japan's major wholesale market. The 2000/01 crop of Florida grapefruit had an excellent taste, well-balanced Brix levels and acidity. However, this season Japanese importers have been cautious on their purchasing volume in order to avoid excessive inventory, a problem last season.

Japan's imports of oranges during 2000/01 are estimated at 140,000 tons. The good taste of U.S. fresh oranges has supported good sales this season. The movement of U.S. fresh oranges is fairly stable in Japan's distribution channels due to the stable supply from the United States. Sales of California Navels, which had a good quality with high Brix levels, were good this season. Japanese sales of fresh oranges have been fairly strong since early April, as Japanese temperatures started to climb. Strong sales are expected to continue with Valencias, although traders are cautious about the import volume in order to avoid excessive stocks.

Korea

In an effort to prop-up producer prices and the market image of Cheju oranges, the Cheju Citrus Grower's Agricultural Cooperative (CCGAC) and provincial government are engaged in measures to reduce the volume and improve the market quality of fruit moving into domestic channels. Measures include encouraging farmers to remove orchards from production (permanently or during alternate years), to thin and prune more frequently, to plant improved citrus varieties, to encourage processors and retailers to sort fruits, to better coordinate marketing efforts, to introduce attractive smaller packages, and to increase export promotion activities. The government's biannual harvest measures are intended to flatten the cyclical production to provide a more stable supply of domestic oranges leading to stable producer prices. The calendar year (CY) 2001 program participation target is to set aside or "rest" 3,000-hectares. However, because of the inflexible nature of orchard-based agriculture--few alternative uses are available for such land during a "resting" year--larger producer incentives may be required to attract greater farmer participation. Through the above-referenced measures, Cheju officials aim to reduce future domestic orange production to 600,000 tons, the calculated optimum for producer prices when holding all supplies constant. On April 1, 2001, the Cheju Provincial Government announced a 995.5 billion won, 10-year citrus industry development plan. The plan calls for reducing Unshu orange planted area to 22,000 hectares that would yield annually 550,000 tons. The plan focuses on the development of alternative crops (i.e., green tea and flowers), the citrus processing industry, the encouragement of environmentally-friendly cultivation practices, and introduction of improved outdoor varieties (i.e., late season varieties), on expansion of marketing channels, and export promotion programs.

In CY 2000, fresh orange imports totaled 99,139 tons, of which 31,183 tons entered under Korea's Minimum Market Access (MMA) quota. Fresh orange non-quota imports exceeded quota imports for the first time, and by a large margin. Three variables underpinned the market's demand for imported oranges: consumer's positive perception of California oranges, ample supplies of reasonably-priced quality U.S. oranges, and higher-cost domestic produce. As of April 16, 2001,

CY 2001 orange imports totaled 57,387 tons (15,312 tons under MMA quota, 42,075 MT out-of-quota). Recently, Cheju officials auctioned off the remaining MMA quota. Korea is now the United States third-largest market for oranges. However, industry expectations of steep price increases for California citrus, specifically for oranges, are expected to dampen import demand the latter half of this year.

Australia, New Zealand, and South Africa offer only limited competition to the United States in the fresh orange import market, accounting for only 4 percent of the trade in 2000. Spain, Israel and Italy are negotiating phytosanitary protocols for orange trade with Korea. Argentina and Egypt are involved in preliminary discussions with the Korean quarantine authority for phytosanitary protocols for a broader range of citrus products. South African oranges face stringent phytosanitary requirements that require both pre- and post-shipment fumigation. Korea-Chile and Korea-China free-trade agreement discussions are creating consternation among Korea's producers over additional competition. However, even if such agreements are reached, separate phytosanitary protocols would need to be negotiated.

Southern Hemisphere

Argentina

Production of fresh citrus in 2000/01 is forecast at 2.63 million tons, up nearly 2 percent from the 2.58 million tons produced in 1999/2000. With the exception of grapefruit, production of all other citrus fruits is expected to increase slightly. Grapefruit production is estimated down only 1 percent.

Total lemon production for 2000/01 (harvested year around with the bulk of the harvest in May and August 2001) is forecast at 1.17 million tons, or 5,000 tons more than in 2000. In Tucuman, the drought during the winter and spring adversely affected the first blossom, but later on climatic conditions improved. However, recent rains have delayed the harvest and resulted in a delay in shipments.

Argentina's orange production for 2000/01 (harvested April-December 2001) is forecast at 830,000 tons, 5 percent higher than last year, due to improved weather conditions in Entre Rios and Buenos Aires provinces. In Entre Rios, last spring was very rainy and windy, and even though an increase in production is expected, it is estimated that the quality of fruit could be below normal levels due to some diseases. In Buenos Aires, the weather conditions during the growing period were good, leading to a higher production forecast for this province.

Tangerine production for 2000/01 (harvested April-November), is estimated at 445,000 tons, compared with 438,000 tons produced the previous year. This slight increase is due to greater tangerine production in the provinces of Buenos Aires, Misiones and Jujuy, which could offset the reduced production in Salta Province. The production of tangerines in the other producing provinces is expected to be similar to last year.

Total exports of fresh citrus fruit in 2000/01 are forecast to reach 283,000 tons, down only about 6,000 tons from the 1999/2000 level. Lemons are forecast to account for about 73 percent of that total.

Australia

Total orange production for 2000/01 (local marketing year April 2001-March 2002) is forecast at 428,000 tons, down 31 percent from the previous year. This is due to a return to normal weather conditions and will result in a more manageable level of production. However, industry sources anticipate dramatically-improved quality with the smaller crop expected to produce larger fruit suitable for export to the United States. A lack of wind and drier conditions have prevented rind damage through abrasion or insect pressure, generally improving the appearance of the fruit. Furthermore, quality assurance measures enforced by packing sheds have led to the adoption of cultural practices aimed at preventing rind breakdown in exported fruit.

Orange exports increased from 45,000 tons during 1990/91 to 111,235 tons during local marketing year 1999/2000. According to official figures, four out of Australia's top five export markets are in Asia and accounted for 66 percent of total exports during this period. Exports for the first 11 months of 1999/2000 (local marketing year 2000/01) are already 25 percent higher than the previous year. The United States was the third largest export destination in local marketing year 2000/01. The lower value of the Australian dollar is expected to improve returns for exports to the United States in April 2001 to March 2002. Industry sources anticipate excellent export prospects in 2001/02 due to the improved quality of the crop and the low value of the Australian dollar.

Industry sources anticipate higher prices for this year as the crop quality improves for both Valencias and Navels. Prices are expected to be further boosted by a smaller crop effectively restricting supply on the domestic fresh market. A dramatic reduction in deliveries to processors for juice production is expected in April 2001-March 2002, as both a smaller crop and increased quality restrict the supply of oranges suitable for juicing.

Prior to 2001, the two major horticultural organizations in Australia were the Horticultural Research and Development Corporation (HRDC) and the Australian Horticultural Corporation (AHC). The HRDC was responsible for research and development and the AHC was responsible for promotional activities. Both organizations were funded by levies paid by growers and received pro-rata government funding for specific purposes such as research and development to a maximum of 0.5 percent of the gross value of industry production. In 1998/99, the total amount of government funding was A\$15.2 million.

In CY 2000, the government of Australia reviewed the legislation pertaining to these bodies and merged both organizations into one, with industry support. Horticulture Australia Ltd. (HAL) is the new organization that replaced the AHC and HRDC on January 1, 2001. This was established under

corporations law as a not-for-personal-profit company in accordance with the Memorandum of Understanding (MOU) signed by 26 industry organizations. The focus of the new company is the continued marketing and promotion of horticultural products in both domestic and export markets, as well as the exploitation of the opportunities for uptake and commercialization of new technology.

Brazil

Brazil's orange production in 2000/01 (local marketing year July 2001-June 2002) is estimated at 14.5 million tons, down 10 percent from the previous year. The commercial area of the state of São Paulo, plus the western part of Minas Gerais is expected to produce 12.9 million tons, an 11-percent decrease compared to the previous crop. The remainder should be provided by other producing regions.

One major large blossoming occurred in the states of São Paulo and Minas Gerais during September 2000. Fruit set, however, was damaged by the drought that prevailed in the producing regions during October and November, resulting in an expected production decrease. The second and third flowerings were sporadic and non-uniform, as opposed to the previous crop, and should not result in a significant volume of oranges. In addition, depressed orange prices in the domestic market led to below-average crop management, further contributing to expected lower production. The steady rainfall that occurred during the past couple of months is also likely to result in fruit splitting.

In the past two years, about 71 percent of the orange crop in Brazil has been processed for the juice sector. In 2000/01 (local marketing year 2001/02), it is estimated that approximately 74 percent of the orange production will be processed.

South Africa

South Africa's citrus production in 2000/01 is forecast at 1.5 million tons, an increase of 13 percent from the previous year. Total orange production is estimated to account for about 76 percent of the total citrus production. South Africa's citrus industry is primarily dominated by the Valencia orange varieties, which include the Delta's Midnights, and Navels. The delivered-in-port prices of Valencias and Navels have reflected good producer prices and real price increases.

Total citrus exports are expected to rise to 850,000 tons from 707,000 tons. South Africa's citrus exports should continue to expand as a result of the Rand's devaluation, which is expected to boost export earnings and depress agricultural imports. The rapid devaluation of the Rand compared to the U.S. dollar should also favor South Africa's exports to the United States, if exporters continue to meet U.S. phytosanitary requirements. South Africa's biggest export market is still Europe, with an estimated volume of about 612,000 tons per year, followed by the Middle East, Japan, the United Kingdom, the Far East and the United States.

(This article was prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, and, in particular, reports of Agricultural Attachés and Foreign Service Officers, results of office research, and related information. The FAS Attache Report search engine contains reports on the Fresh Citrus industries for more than 10 countries, including Argentina, Brazil, China, Italy, and Spain. For information on production and trade, contact Debra A. Pumphrey at 202-720-8899.)

1/ Forecast.

2/ In Greece, Italy, and Spain "consumption" includes fruit withdrawn from the market under the European Union price support program.

3/ Crop years refers to harvest and marketing period, which usually begins in the fall and extends to the spring. This corresponds roughly to October-June in the Northern Hemisphere and April-December in the Southern Hemisphere. For the Southern Hemisphere, harvest occurs almost entirely during the second year shown.

Orange Juice Situation

Orange juice production in the major producing countries in 2000/01 is estimated at 2.2 million tons, down nearly 10 percent from 1999/2000, mainly the result of lower availabilities of oranges for processing. Northern Hemisphere orange juice production is forecast down nearly 11 percent, while Southern Hemisphere production is off 8 percent. Brazil's production during 2000/01 is estimated at 1.1 million tons, a drop of 95,000 tons from the previous year.

Northern Hemisphere

United States

U.S. production of orange juice in 2000/01 is forecast at 988,000 tons, a decline of 7 percent from the 1999/2000 level. According to the July 11, 2001, NASS Crop Production report, Florida frozen concentrated orange juice (FCOJ) yield projection is 1.58 gallons per box of 42.0 degrees Brix. The early and mid-season portion is final at 1.54 gallons per box as reported by the Florida citrus Processors Association. The Valencia FCOJ yield is forecast at 1.65 gallons per box.

U.S. exports of orange juice are forecast at 95,000 tons, down from 100,134 tons in 1999/2000. However, through May, U.S. exports of orange juice are tracking 5 percent ahead of last year's pace. U.S. imports of orange juice are estimated at 195,000 tons, a drop of 19 percent from the previous year. However, through May, U.S. imports of orange juice are running about 24 percent behind the 1999/2000 pace. In order to maintain consumption at near last year's level, imports of orange juice will need to increase in the next few months, exports need to slow down, or both. U.S. consumption of orange juice during 2000/01 is estimated at 1.15 million tons, about unchanged from the 1999/2000 level. Ending stocks of orange juice are currently estimated at 369,000 tons, down nearly 14 percent from the previous year.

Japan

Japan's orange juice imports during 2000/01 are estimated at 105,000 tons, up nearly 4 percent from the 1999/2000 level. Brazil is the major supplier of orange juice to Japan, accounting for over 80 percent of the total in 1999/2000. Japan's fruit beverage production in CY 2000 was 2.25 million liters, up 2 percent from the previous year. Japan's largest consumption of fruit beverage by type is a soft drink with some content of natural fruit juice, followed by a 100-percent natural fruit juice product. The products that contain 10-30 percent natural fruit juice showed a 135-percent increase in production in CY 2000 over CY 1999, and continue to grow strongly this year. The trend in Japan's fruit beverage market is for Japanese beverage manufacturers to continue to market new soft

drink products containing 10-30 percent natural fruit juice. Kirin Tropicana and Minute Maid, Japan's leading fruit juice manufacturers, will launch big sales promotions for 100-percent natural orange juice this season. Japanese traders hope for a good market recovery for 100-percent fruit juice products.

Mexico

FCOJ production for 2000/01 was revised to 37,000 tons, a decrease of nearly 10 percent compared with the previous year. According to sources, lower international prices and higher international stocks resulted in a decrease of FCOJ production. Juice production depends heavily on the international price of FCOJ. The forecast for oranges for processing was revised downward to 370,000 tons. Lower international prices represents smaller margins for the industry.

The export estimate for FCOJ for MY 2000/01 was revised downward due to a decrease in demand and lower prices. Furthermore, the strength of the peso against the dollar that has prevailed in 2000 and 2001 has not helped the export industry. According to industry sources, Mexico will fill 100 percent of the 2001 U.S. quota. The export estimates for 1999/2000 were also revised downward based on recent official trade data. FCOJ imports are almost negligible compared to domestic production.

Southern Hemisphere

Australia

Production of orange juice for 2001/02 is forecast at 12,700 tons, representing a decrease of 43 percent from the previous year, mainly due to decreased citrus production, particularly Valencias. In addition, a general increase in fruit quality is making a higher percentage of oranges suitable for the higher-return local fresh market or premium export markets. Delivery to processors for 2000/01 (local marketing year April 2001-March 2003) is forecast at 170,000 tons, down from 300,000 tons the previous year.

Orange juice consumption is estimated at 44,900 tons for 2000/01. On July 1, 2000, the government of Australia (GOA) introduced a goods and services tax (GST). The GST is charged at 10 percent for all goods with an exemption for fresh food. Under the GST, all orange juice containing more than 90 percent orange juice will be exempt from the GST, effectively making it tax free. All other orange juice will be taxed at 10 percent, lowering the overall level of tax significantly.

Orange juice imports in 1999/00 (local marketing year April 2000-March 2001) dropped slightly compared with the previous year but are expected to increase in 2000/01 as a result of the smaller crop and the lower availability of suitable fruit. In the medium-term, the reduction in the numbers of bearing Valencia trees, the increase in Navel production, and the increase in processing fruit diverted to fresh juice production are likely to contribute to a reduction in concentrated juice

production and may lead to increased imports of FCOJ.

Orange juice imports are higher during June through February, with November and December being peak months. In 1988/89, an ad valorem tariff of 35 percent was implemented. This was gradually reduced to the current 5 percent on July 1, 1996. Industry groups are pushing to have this tariff increased as a result of the increased competitiveness of imported juice, particularly from Brazil.

In 1999, the GOA announced changes to legislation which are designed to strengthen labeling laws. The goal of the legislation is to prevent companies from misusing the "Made in Australia" label, and to reinforce the "Product of Australia" description. This prevents imported FCOJ from being reconstituted and then labeled as "Made in Australia." The general test for the "Made in Australia" label is that the goods have been substantially transformed and that 50 percent or more of the cost of production or manufacturing of the goods is attributable to production or manufacturing processes in Australia. The general test for the "Product of Australia" label is that each significant ingredient or significant component of the good and all, or virtually all, processes involved in the production or manufacture must take place in Australia. The legislation also regulates the use of a logo that may indicate the country of origin of the product.

The processing sector has been stimulated recently by an increase in fresh juice production. The push into fresh juice has been bolstered by the development of a "100 Percent Australian Juice" logo by the Australian Citrus Growers Inc. (ACGI) in conjunction with the Australian Horticultural Corporation (AHC) and major juice marketers. The distinctive orange squeezer logo means that the juice contains no concentrate, no artificial coloring, no added water, and no imported product. The advertising campaign has included television and newspaper coverage. Seven juice companies, including the three major juice companies representing 80 percent of the fresh juice industry, are licensed by the AHC to use the logo.

Brazil

Brazil's FCOJ production in 2000/01 (local marketing year July 2001-June 2002) is forecast at 1.09 million tons, down 8 percent from the previous year due to the lower volume of oranges for processing. FCOJ production for the state of São Paulo is forecast at 1.06 million tons compared with 1.14 million tons the previous year. The FCOJ industry in Brazil is highly concentrated and just a few companies are expected to operate in local marketing year 2001/02. Sources indicate that smaller companies, such as Branco Peres and Kiki, are not expected to crush oranges this upcoming season. It was also reported that Cargill will not operate its Uchoa plant, with all processing directed to the Bebedouro facility.

Brazil is presently in the midst of a critical electrical energy shortage. Low rainfall is hampering the local hydro-electric system, which supplies over 90 percent of the country's electricity. The only near-term solution is conservation. Regarding the food industry, the government of Brazil (GOB)

has called for a 15-percent reduction in use of electricity from the May-July 2000 average through the remainder of the winter dry season and has threatened significant surcharges and service cuts to enforce the needed cuts. It is hoped that the rainy season, which normally begins in November over much of Brazil, will bring relief. Longer-term solutions, such as investment in alternative generation options, are under review. According to industry contacts, the energy shortage could affect both FCOJ processing and storage at the plant and at the port. The FCOJ plants were able to set an agreement with the GOB and the 15-percent reduction will be based on the months they fully operate and not on the GOB-mandated average consumption of May-July 2000, when they were closed or only partially operating. Each company will have the freedom to share the energy they are allowed among their plants or even sell part of their quota to other companies.

Brazil's consumption of FCOJ is estimated at 16,000 tons, unchanged from the 1999/00 level. Sources report that the retail market for orange juice is controlled by a few large supermarket chains which have a significant bargaining power over suppliers. In addition, supermarkets charge different taxes and fees to allow suppliers to have their products on the shelves. In addition, ready-to-drink orange juice is price competitive relative to concentrated orange juice. A 1-liter can of concentrated orange juice is about R\$6-8 and yields 7-8 liters of juice ready to drink, while 1 liter of ready-to-drink juice costs R\$2-2.5. Although less cost efficient, many orange juice consumers are willing to spend R\$2-2.5 instead of R\$6-8 because this represents a lower initial expense.

Brazil's electric energy shortage may also affect future consumption of FCOJ, since Brazilian families are also required to cut 20 percent of their May-July 2000 average energy consumption. Many households are unplugging their freezers in order to reach their 20-percent reduction goal and this could eventually lead to a decrease in local FCOJ consumption. In addition, if orange juice companies have to lease or purchase energy generators powered by diesel, there will be an increase in production costs, which will be at least partially transferred to consumers.

FCOJ exports for 2000/01 are estimated at 1.19 million tons, down 4 percent from the previous year. According to contacts, May and June are not strong months for FCOJ exports since many small processing plants have already shipped their production and many companies hold stocks to blend with early orange juice from the upcoming season. Recently, the GOB has allowed orange juice companies to ship product abroad on a consignment basis.

There is no official estimate for not-for-concentrate (NFC) supply and demand in Brazil. According to updated information provided by industry contacts, approximately 490,000 tons of oranges have been crushed for local marketing year 2000/01. These include 326,000 tons crushed for the domestic market--122,000 tons for pasteurized production and 204,000 tons for fresh squeezed production--and 163,000 tons crushed for exports.

(This article was prepared or estimated on the basis of official statistics of foreign governments, other foreign source material, and, in particular, reports of Agricultural Attachés and Foreign

Service Officers, results of office research, and related information. The FAS Attache Report search engine contains reports on the Orange Juice industries for approximately 10 countries, including Mexico and Brazil. For information on production and trade, contact Debra A. Pumphrey at 202-720-8899.)

Organic Updates

Singapore's Organic Market: Small But Growing

Singapore's market for organic foods was estimated at about \$3.5 million in 2000. Currently, Singapore's domestic production is limited to some fresh vegetables. The United States leads the import market in all areas, except fresh produce. Australia is currently the main competitor for the United States and can supply many of the same products that are being imported from the United States. New Zealand is a competitor in organic meats, specifically beef, and a small number of other products. Malaysia and India have some strengths in the organic vegetable market. Overall, the United States is perceived to have a better range and better quality products than Australia or any other country.

The market for organic foods is a series of niche markets which are continuing to see moderate growth. Organic foods interact with products that are described as "chemical free" rather than organic and other products whose ingredients are only partially organic. Most local consumers do not understand organic foods and consumer education about these products is currently very weak.

Over the past 5 years, there has been a significant increase in the number of products in the market. More products are carried by conventional retailers, but the market still revolves around smaller health food shops and concession space rented by some importers from some mainstream retailers. Demand appears strongest for organic brown rice, products consumed for health reasons (organic cider vinegar and herbal teas), and some convenience foods consumed by western and Japanese expatriates. According to the trade, they are still trying to source authentic Asian organic processed foods, organic seafood, and some varieties of organic cereal flours. To read the full report on the Singapore market for organic products, go to <http://www.fas.usda.gov/scripts/attacherep/default.asp> and request report SN1006.

Canada Offers Financial Assistance for Organic Food Producers

Agriculture and Agri-Food Minister Lyle Vancilief announced federal funding totalling C\$600,000 (US\$400,000) to help Canadian organic food producers increase domestic and international sales. The bulk of the federal assistance money will fund the Organic Accreditation Assistance Program, a plan to encourage certifying bodies to apply for accreditation under the National Organic Standard. The remainder will help offset publishing costs of an Organic Field Crop Handbook and support next year's International Federation of Organic Agriculture Movements World Congress in Victoria, British Columbia, which is expected to attract 1,000 delegates from around the world. Agriculture and Agri-Food Canada believes Canadian retail sales of organic food exceeds C\$1 billion (\$660,000 million). Canada adopted a national organic standard in 1999.

Turkey's Organic Industry: Mostly for Export, But Domestic Demand is Growing

Turkey has been producing organic products since the mid 1980s, when a Turkish trade delegation to Europe was approached on supplying organic products to the Netherlands. Dried sultanas, apricots, and figs were the first items to be produced organically. Since that time Turkey has increased production and exportation of organic agricultural products. Most products are grown in the Aegean region. Domestic consumption remains very limited at about \$3 to \$5 million a year, but shows signs of increasing growth as dedicated organic retailers have begun operations in the past year. Turkish organic production can be broken into the following product categories: dried fruits, edible nuts, spices and herbs, fresh or processed fruits and vegetables, pulses, cereals, industrial crops, other raw/processed products. The leading products are sultanas, figs, apricots, and hazelnuts. Frozen fruits and vegetables and fruit juice-concentrates are two other product areas which are growing in Turkey. To read the full report on the Turkey's market for organic products, go to <http://www.fas.usda.gov/scripts/attacherep/default.asp> and request report **TU1029**.

For more news on organics, see HTP's newsletter "Organic Perspectives," available at the HTP home page: www.fas.usda.gov/http/organics/organics.html.

World Trade Situation and Policy Updates

Mexico Limits Ports of Entry for U.S. Apples

On June 29, 2001, Mexico's Secretariat of Treasury announced that imports of apples from the United States will only be allowed through the ports of Ciudad Juarez, Nogales, Ciudad Reynosa, Manzanillo, and Tijuana. With this action, Mexico eliminated access for U.S. apples through Nuevo Laredo, which had been the leading port of entry. The announcement is reportedly part of Mexico's efforts to control alleged unfair practices involving apples coming from the United States. Mexico is the top destination for U.S. apples, with sales in marketing year 1999/2000 (July-June) totaling 155,000 tons, valued at \$85 million.

California Table Grape Exports to New Zealand Expected to Resume

After a series of technical exchanges and intensive coordination by the APHIS Canberra Office and FAS/Wellington, an Import Health Standard for fresh California table grapes has been finalized. As a result, grape shipments to New Zealand are scheduled to begin shortly under a pre-clearance program. At the end of the 2000 U.S. export season, New Zealand temporarily revoked the Import Health Standard for the importation of fresh table grapes from California due to several identified plant quarantine pest. For 2000, U.S. table grape shipments to New Zealand were valued at \$3.9 million, down 10 percent from the previous year.

Think outside the borders.

Ever felt like you were trapped inside a cookie cutter,
with all your competitors chasing the same customers?

Well, **96 percent of the world lives outside our borders** and,
with a little effort and a little help, you can reach them.

USDA's Ag Export Services can put your message on line and
in newsletters, translated into dozens of languages and in front of
buyers in 75 countries for \$15. And that's just for starters.

*To learn how you can sell your food or fiber products
outside our borders, contact USDA's Ag Export Services.*

Thank you for your order!

FOREIGN AGRICULTURAL SERVICE PUBLICATIONS

The publications listed below present timely and reliable information on U.S. and world production, supply and demand, and trade for many different commodities. All these publications can be subscribed to through the National Technical Information Service (NTIS) of the U.S. Department of Commerce. To order, call NTIS at 1-800-363-2068, (703) 605-6060, or (703) 487-4639 for TDD (hearing impaired only). A subscription form is provided on the reverse side.

AgExporter Magazine

Monthly magazine for businesses selling farm products overseas provides tips on exporting, descriptions of markets with the greatest sales potential, and information on export assistance available from the U.S. Department of Agriculture. The audience is U.S. agricultural producers, exporters, trade organizations, state departments of agriculture, and any other export-oriented organization.

Cotton: World Markets and Trade

Monthly report provides statistics and other information on U.S. and world production, supply and demand, and trade for cotton. Covers crop conditions, the latest trade policy developments, and export market information.

Dairy Monthly Imports

Monthly report of imports of cheese and other quota dairy products subject to licensing, as well as imports under the quota not subject to licensing.

Dairy: World Markets and Trade

Semi-annual publication provides information on U.S. and world production, use and trade of dairy products, trade policy developments, and export market information.

Grain: World Markets and Trade

Monthly publication provides information on U.S. and world production, supply and demand, and trade for a variety of grains. Covers crop estimates, the latest trade policy developments, and export market information.

Livestock and Poultry: World Markets and Trade

Semi-annual publication provides information on U.S. and world production, use and trade of livestock and poultry products, trade policy developments, and export market information.

Monthly Summary of Export

Credit Guarantee Program Activity

Monthly summary report shows fiscal year commitment figures for the Commodity Credit Corporation's Export Credit Guarantee Program (GSM-102) and Intermediate Credit Guarantee Program (GSM-103).

Oilseeds: World Markets and Trade

Monthly publication provides data and analyses on U.S. and world production, supply, use, and trade of a variety of oilseeds and products. Covers production estimates, latest trade policy, commodity prices, and export market information.

Sugar: World Markets and Trade

Semi-annual publication provides information on the world production and supply and demand situation for sugar. Includes in-depth special country features.

Tobacco: World Markets and Trade

Quarterly report provides information on U.S. and world production, supply and demand, and trade for tobacco. Covers crop estimates, the latest trade policy developments, and export market information. The March issue contains complete U.S. tobacco trade data for the preceding calendar year.

Tropical Products: World Markets and Trade

Issued four times a year. Provides information on the world production and supply and demand situation for coffee and tea. Presents U.S. trade data on spices and essential oils.

U.S. Export Sales

Weekly report based on reports submitted by private exporters. Outstanding export sales as reported and compiled with other data give a snapshot view of the current contracting scene. All countries with outstanding sales or accumulated exports are included for each class of wheat, all wheat, wheat products, corn, soybeans, soybean cake and meal, American pima cotton, all upland cotton, whole cattle hides, and wet blues.

Wood Products:

International Trade and Foreign Markets

Issued five times a year. Provides information on the production, trade, and supply and demand situation in countries around the world for wood products. Highlights the latest trade policy developments, export statistics, and market information of interest to U.S. exporters.

World Agricultural Production

Monthly report provides information on U.S. and world production of major agricultural products, including crop, weather and production briefs, and special articles of interest to the trade.

World Horticultural Trade and U.S. Export Opportunities

Monthly publication provides information on the world situation and outlook for horticultural products. Covers export competition, foreign market import potential, and export opportunities for U.S. horticultural products.

Summaries and selected tables from many Foreign Agricultural Service world market and trade reports are available electronically. The reports include U.S. Export Sales (available electronically after 8:30 a.m. on release day); Grain: World Markets and Trade; Oilseeds: World Markets and Trade; Cotton: World Markets and Trade; Tobacco: World Markets and Trade; World Agricultural Production; the early release version of

World Horticultural Products and U.S. Export Opportunities; and Tropical Products: World Markets and Trade (all available electronically after 3:00 p.m. Washington DC time on release day) as well as Sugar: World Markets and Trade; Livestock and Poultry: World Markets and Trade; Dairy: World Markets and Trade, and U.S. Planting Seed Trade (available within a week after release.)

You can read the reports on the FAS home page (<http://www.fas.usda.gov>). The reports remain "current" until the succeeding issue is available. Older issues are available in the archives section of the home page. We also make selected cover articles and graphics available from these publications, in a separate section of the site. Reports are also available from the Economic Bulletin Board at Stat-USA, on the same schedule. For more information, you may contact Stat-USA at (202) 482-1986 (Monday-Friday, 8:30-5:30 p.m. Washington, DC time.)

For more information on the FAS home page, contact Glenn Kaup, tel. (202) 720-3329; fax. (202) 720-3229; or via e-mail kaup@fas.usda.gov

The U.S. Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. (Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at 202-720-2600 (voice and TDD).

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, DC 20250, or call 1-800-245-6340 (voice) or (202) 720-1127 (TDD). USDA is an equal employment opportunity employer.
